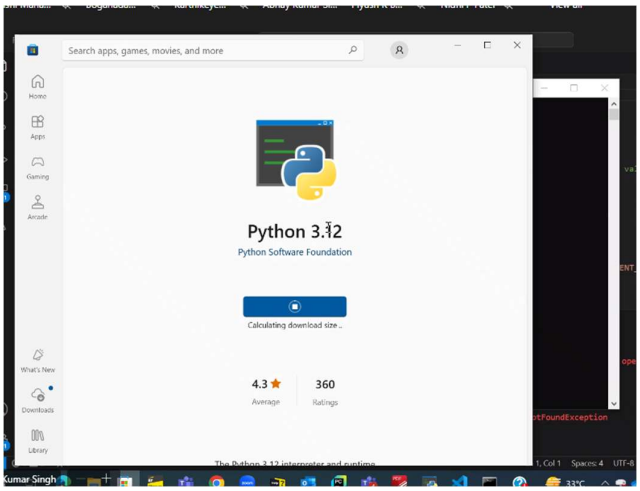
STEPS FOR PYTHON INSTALLATION

1) Run python on command prompt.
   if installed, it will show the python prompt. If not, it will show the below UI



Download and install Python from above.

2) Edit system environment, add path to python
   From windows menu, choose “Edit system variables” and add the path to Python as follows:

   It will be similar to:

C:\Users\BN743PF\AppData\Local\Programs\Python\Python312
