

## **SAMPLE PROMPT TO CREATE A KNOWLEDGE GRAPH, RETRIEVAL FLOW USING LLM**

Create python code to demonstrate in a simple manner use of neo4j as graph database and AWS Bedrock Claude 3.5 Sonnet as LLM.

- 1) Create 30-40 nodes and 10-20 relationships for medical setup - with nodes for doctors, nurses, patients, diseases, treatments and relations between them
- 2) Take an example prompt, for example: "Which doctors treat pneumonia?" and use the LLM to create the cypher query for it and send the query to neo4j
- 3) Send the query results and the prompt to the LLM to get formatted response
- 4) print the response Access the LLM using boto3 library, langchain and following environment variables:

AWS\_ACCESS\_KEY\_ID , AWS\_SECRET\_ACCESS\_KEY , AWS\_REGION

Create code in a simple straightforward flow that is easy to understand for learners
